

Help me install

How to install Skyfire from the download link in our SMS

Your phone needs to have web-based SMS (text) messaging enabled. Follow these instructions to download Skyfire and install it on your Windows Mobile 5 or 6 phone, or your Symbian (Nokia E-series and N-series) phone in the US. If your phone is not currently supported, you won't be able to install Skyfire.

1. Delete all old Skyfire installation files
2. Soft reset
3. Click on the link in the SMS

Clicking on the link will open the default browser on your phone and detect your phone type, if it didn't detect your phone correctly, click "Change my phone type" and select the correct phone type

4. Enter your password and click on Submit

This will open the default browser on your phone with the download link.

5. Click on the download link

You will get a prompt, "Download the XXX kb file 'filename.cab'?"

- The filename is populated by one of the following, with the corresponding file size:
 - Windows Mobile non-touchscreen: Skyfire_6873_SMP50.CAB
 - Windows Mobile touchscreen: Skyfire_6873_PPC50.CAB
 - Symbian Series 60 3rd Edition: Skyfire_Symbian_5578-S60.sisx

6. Select Yes

7. Choose to install to DEVICE (Skyfire requires ~10MB free memory on your device to function properly)

8. Click on Install

9. Agree to the Software Evaluation & Confidentiality Agreement

10. Launch Skyfire

- Enter your registered email address
- Enter your password
